University Teaching-Tony Harland 2012 University Teaching: An Introductory Guideis a vital tool for the new lecturer that aims to encourage and support an inquiry into university teaching and academic life. This book understands that teaching is not discrete but one of many activities integrated in academic work. It recognizes that teaching is directly affected by administrative concerns such as timetabling and workload demands, departmental culture, disciplinary research expectations and how we think about the purposes and values of higher education. The new lecturer must learn to adapt to and shape the circumstances of their academic work. Understanding that teaching is an integral part of this work, rather than a dislocated discipline, can help us think about practice in new ways. Harland argues against the teaching-research divide and popular opinion that 'teaching takes time away from research'. He proffers the sentiment that all aspects of academic practice need to be considered when inquiring into learning how to teach, and that teaching is better understood when it is firmly embedded and integrated in this work. Writing from his experience extracted from a ten-year research project working with early career staff, he addresses popular concerns of academics, including: Lecturing Peer review of teaching Discussion as an approach to teaching Research and the new academic The subject and the idea of critical thinking This clearly written and practical book will be ideal for all new lecturers in higher education, and also more seasoned academics wishing to progress their professional development. Tony Harland is Associate Professor at the Higher Education Development Centre, University of Otago, New Zealand

Historiography: An Introductory Guide-Eileen Ka-May Cheng 2012-03-08 "What is historiography?" asked the American historian Carl Becker in 1938. Professional historians continue to argue over the meaning of the term. This book challenges the view of historiography as an esoteric subject by presenting an accessible and concise overview of the history of historical writing from the Renaissance to the present. Historiography plays an integral role in aiding undergraduate students to better understand the nature and purpose of historical analysis more generally by examining the many conflicting ways that historians have defined and approached history. By demonstrating how these historians have differed in both their interpretations of specific historical events and their definitions of history itself, this book conveys to students the interpretive character of history as a discipline and the way that the historian's context and subjective perspective influence his or her understanding of the past.

A further chapter has been added on the work of Jean Baudrillard, a cult figure on the current postmodernist scene, whose ideas have attained a wide currency. The chapter includes a new section on postmodern cultural practices as revealed in architecture, TV, video, and film.
